

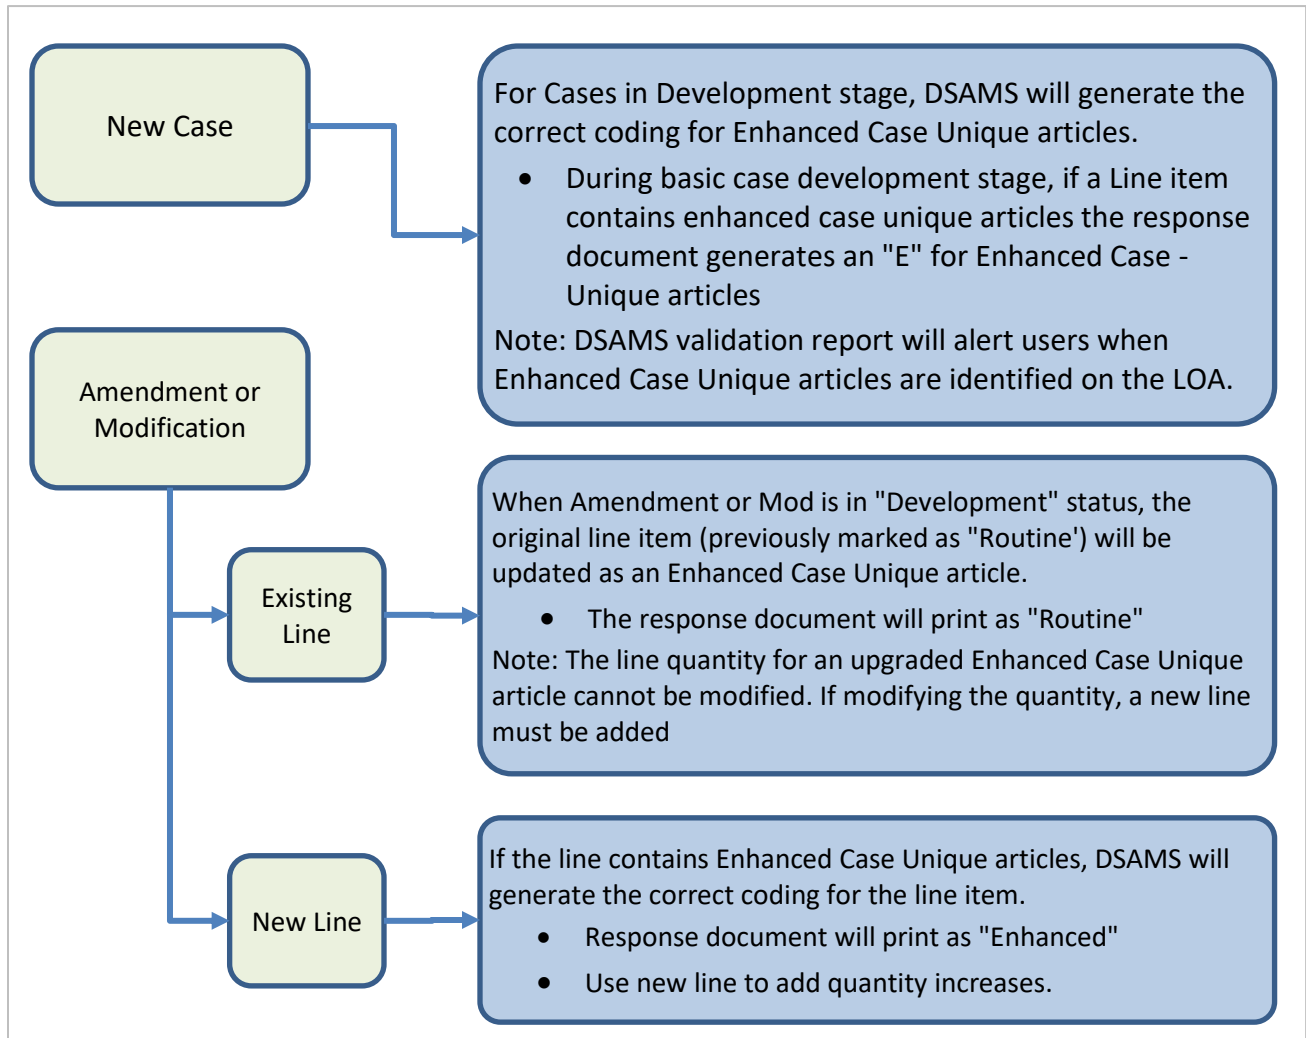

Figure C8.F2. Designating Enhanced Case Unique Defense Articles Process Flow

*Only authorized personnel, (i.e. DSA AMP EUM Program Managers, DSA Weapons, and selected DSAMS users) will have access rights to the DSAMS Enhanced Case-Unique Defense articles database.*

Notes:

1. DSAMS will generate warnings to the Implementing Agencies (IA) that the LOA contains an Enhanced Case-Unique article.
2. The DSAMS Case Validation Report will alert users when Case Unique defense articles are identified on an LOA, which will require the DSAMS user to take action according to End-Use Monitoring Responsibilities assigned in Chapter 8, Table C8.T2.
3. The LOA response document will print accordingly either as "Routine" for lines previously implemented or "Enhanced" on lines being added. If a line was previously implemented as Routine and is changed to Enhanced after the original document, then it will be displayed as Enhanced on future documents. Once a line has been designated as Enhanced, the correct coding will propagate in subsequent documents as Enhanced.
